To whom it may concern

This recommendation letter is associated with Mr. Pouya Khani's application for any PhD position in the field of Machine Learning and/or networking.

I know Pouya since 6 months ago as he found me in LinkedIn to collaborate in a research project related to the use of Machine Learning for Networking resulting in publishing a high-quality paper in a well-known journal. I have had a very good experience in collaborating with him as he has a lot of motivation to work on scientific topics. As a graduate student, he works on cutting-edge topics in his research fields showing his high abilities in working as a researcher. Pouya Khani is an outstanding junior researcher who has consistently demonstrated a high level of dedication, motivation, and commitment to his research work. Throughout our collaboration, I have been impressed by his scientific skills and his capabilities of team working. He is always eager to learn and expand his knowledge and has a keen interest in new technologies, tools and scientific paradigms.

Although the age of our collaboration is not so long, I have been impressed by his motivation and I have no doubt that Pouya Khani would be an excellent PhD candidate in your PhD program. His enthusiasm and dedication to his work, coupled with his analytical and critical thinking abilities, make him an exceptional PhD candidate. I highly recommend Pouya Khani to any institution or organization looking for a PhD candidate.

Do not hesitate to contact me if you need more information regarding Pouya Khani.

Best wishes

Shahraki

Dr. Amin Shahraki
